Definition of the terms used to describe the quality of the clone: The about 2250 sequences from the clone collection were sorted according to clones and clustered. If more than one contig was fargiletons were blasted against CDS plus pseudogenes from the esting sand singletons were blasted against CDS plus pseudogenes from the TIGRYS annotation, and matches longer than 50 bp with 95 percent identity are reported as 'intron found'. The remaining terms for Seqanalysis describe the outcome of the evaluation of the CDS detected after pairwise alignment with CDS plus pseudogenes from the TIGRYS annotation file. The sequences or contigs for which a full CDS with or without STOP codon was detected, a BLASTP against all TIGRYS protein sequences was performed. Pull perfect: 100 percent identity, full good: better than 95 percent identity over less than 95 percent identity over less than 95 percent identity was himiarity; less than 95 percent identity over less than 95 percent of the sequence; weak similarity; less than 95 percent identity over less than 95 percent of the sequence; weak similarity; less than 95 percent identity over less than 95 percent of the sequence; weak similarity; less than 95 percent identity over less than 95 percent of the sequence; obviously, information about these clones for which sequencing was not successful, which could have simple technical reasons.

Determine the collection contains a few clones for which sequencing in the reserved to the sequence of the s
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           /lab hose="000-G10"

/note="mgrange" in a filamentous ascomycete with a haploid genome (n=7) of approximately 40 Mbp. Rice
blast is an important model fungal phosen for studying
numerous aspects of the fungal-host interaction. In
order to facilitate genome wide analysis, a BAC library
containing 9216 clones with an average insert size of 130
kbp was constructed. This library represents greater
than 25X genome coverage. High density colony filters
are available upon request."

/clone_lib="CUGI Rice Blast BAC Library of a haploid genome (n=7) of approximately 40 Mbp. Rice blast is an important model fungal pathogen for studying numerous aspects of the fungal-host interaction. In order to facilitate genome wide analysis, a BAC library containing 9216 clones with an average insert size of 130 kbp was constructed. This library represents greater than 25X genome coverage. High density colony filters are available upon request."
